

The diagram illustrates a central power block surrounded by a vast field of heliostats. The heliostats are arranged in concentric rings, with the inner rings being more densely packed. The power block is a complex structure with a tall central tower and various support buildings. The heliostats are represented by small, dark, rectangular shapes, each with a small, lighter-colored square in the center, indicating the mirror surface. The overall layout is circular, with the power block at the center and the heliostats extending outwards in all directions.

Heliostat Field

Power Block

- Up to 17,500 individual Heliostat assemblies plus control systems
- ~12,000,000 ft<sup>2</sup> mirror surface
- Concentric rings extending 1.6 miles in diameter around tower
